Docket: 0756-945

expanding said laser beam in a first direction to form an expanded laser beam;

removing a <u>peripheral</u> portion of said <u>expanded</u> laser beam [though] through a mask to form a <u>masked laser beam</u>, said <u>peripheral</u> portion including at least edges of said expanded laser beam extending in said first direction; and

condensing said <u>masked</u> laser beam in a second direction orthogonal to said first direction [in order] <u>after removing said peripheral</u> <u>portion</u> to form a [line-shaped] <u>condensed</u> laser beam [on an] <u>at the</u> object, <u>said condensed laser beam being line-shaped</u>.

6. (Amended) A method for treating an object with a laser comprising the steps of:

emitting a rectangular-shaped laser beam from [a] the laser; expanding said laser beam in a first direction to form an expanded laser beam;

removing a <u>peripheral</u> portion of said <u>expanded</u> laser beam [though] <u>through</u> a mask <u>to form a masked laser beam</u>, said <u>peripheral</u> portion [said portion] including at least edges of said expanded laser beam extending in said first direction; and

condensing said <u>masked</u> laser beam in a second direction orthogonal to said first direction [in order] <u>after removing said peripheral</u> <u>portion</u> to form a [line-shaped] <u>condensed</u> laser beam [on an] <u>at the</u> object, <u>said condensed laser beam being line-shaped</u>.

11. (Amended) A method for treating an object with a laser comprising the steps of:

emitting a laser beam from [a] the laser;
